Art Unit: 3687

## **DETAILED ACTION**

The Remarks/Argument filed on 9 November 2009 has been acknowledged. Currently, claims 1 - 13, 15 - 53 are pending and considered as set forth.

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 3. Claims 1 4, 7, 18 19, 23 29, 37 43, 45, and 53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollar et al. (US 20030126048) in view of Lynch et al. (US 20030033242).

As per Claims 1, 25, 39 and 40, Hollar et al. (hereinafter Hollar) discloses a computer-readable medium comprising a plurality of code modules that control a

computer (See Figure 3a; via the system runs with computer program), the plurality of code modules which when executed on a processor cause the processor to operate a computer application, the modules comprising:

a distributing module receiving a total amount and a calculation rule representation from the application to calculate a partial amount representation (See Hollar paragraph 13, 72 – 74, paragraph 173, and paragraph 208; via the system receives information on contract or agreement, total amount, payments for lease and charges on an accrual basis);

a posting module receiving the partial amount representation to provide a modifying instruction to a first table and to a second table in a database (See paragraph 75, 95 and 200; via report is provided for ledger and journal entries); and

the modifying instruction received by the posting module being executed by the processor to modify a first table and a second table in a database (See figure 1, and paragraph 75, 95 and 200; via report is provided for ledger and journal entries which are processed by a processor in the computer system);

However, Hollar is silent regarding the partial amount representation including an amount value that is posted to an account on a periodic schedule, the periodic schedule being determined by the calculation rule representation; the modifying instruction being based on the partial amount representation received by the posting module.

Lynch discloses system and method for automated process of deal structuring having the partial amount representation including an amount value that is posted to an

account on a periodic schedule, the periodic schedule being determined by the calculation rule representation (Paragraph 124 – 147 teaches calculating monthly payment rate using the total loan amount and rate and time information); and

the partial amount representation received by the posting module (Paragraph 124 – 147 teaches calculating monthly payment rate using the total loan amount and rate and time information).

Therefore, from this teaching of Lynch, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include module to calculate partial amount representation such as monthly payment as taught by Lunch to provide accurate loan related information to customers.

Furthermore, all the claimed elements were known in the prior arts of Hollar and Lynch, and one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would have yielded predictable results to one of ordinary skill in the art at the time of the invention.

As per Claims 2, 26, and 41, Hollar discloses wherein the calculation rule representation comprises contract information (See paragraph 72; via contract or agreement).

As per Claims 3, 27, and 42, Hollar discloses wherein the contract information comprises data selected from the group of: time points, a sum value, and a history (See paragraph 74; via history information, payment periods, and depreciation calculation.

The Examiner construes that payment period is equivalent to payment period and depreciation calculation as a sum value).

As per Claims 4, 28, and 43, Hollar discloses wherein the partial amount representation represents an accrual value (See paragraph 142; via A/R rules determines whether accounting is performed on an accrual basis).

As per Claims 7 and 45, Hollar discloses wherein the distributing module and the posting module each are provided twice to simultaneously calculate based on different rules (See paragraph 104; via various validations are performed at the lease level. In order to validate, two identical data should be sent simultaneously to different algorithm and the result should be matched. Therefore, the Examiner construes that validation is equivalent to providing sets of data twice simultaneously to calculate based on different rules).

As per Claims 18, 37 and 53, Hollar discloses wherein at least one computer application is provided that comprises functions selected from the group of: leasing, stock option accounting, e-business accounting, financial services, customer relationship management, product lifecycle management, and media (See Hollar et al.

abstraction; via a system is provided for effectively managing lease transactions in a comprehensive manner).

As per Claims 19, and 38, Hollar discloses wherein the modifying instruction comprises reports (See paragraph 74; via generating appropriate reports).

As per Claim 23, Hollar discloses wherein a visual user interface is adapted to provide remote-control of the distributing module and the posting module (See paragraph 71; user connect to the system using internet or WAN or LAN).

As per Claim 24, Hollar discloses wherein at least one of the first and second tables comprises a ledger (See paragraph 117; via general ledger and journal entries).

4. Claims 5-6, 11-13, 10-22, 29-30, 32-34, 44, and 48-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollar et al. (US 20030126048) in view of Lynch (US 20030033242) and in further view of Boicourt et al. (US 20010029475)

As per Claims 5, 29, and 44, Hollar teaches all the elements of the claimed invention but is silent regarding wherein the distributing module receives the total amount and the calculation rule representation with the total amount at a first time point and with the calculation rule at a second time point.

Page 7

Boicourt et al (hereinafter Boicourt) discloses a financial processing system having wherein the distributing module receives the total amount and the calculation rule representation with the total amount at a first time point and with the calculation rule at a second time point (See Fig 19; balance forward, current month transactions, and the year to date balance. The examiner construes that "balance forward" is equivalent to the total amount of the first time point and the "current month" and "year to date" are equivalent to the calculation rule representation and total amount of the second time point. Calculation rule presentation is considered as the monetary amount that should be credited or debited. Year to date column displays the total amount of balance after adding/subtracting the transactions of current month from the balance forward).

Therefore, from this teaching of Boicourt, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include a module receives the total amount at first time point and calculation rules at second time point as taught by Boicourt to easily identify the transaction of money and process accounting information to receive final total balance of the account.

As per Claim 6 and 30, Hollar teaches all the elements of the claimed invention but is silent regarding wherein receiving the calculation rule at the second time point triggers a calculation.

Boicourt discloses a financial processing system having wherein receiving the calculation rule at the second time point triggers a calculation (See Fig 19; balance

forward, current month transactions, and the year to date balance. The examiner construes that "balance forward" is equivalent to total amount at first time point and the "current month" and "year to date" are equivalent to calculation rule representation and total amount at the second time point. Calculation rule presentation is considered as the monetary amount that should be credited or debited. Year to date column displays the total amount of balance after adding/subtracting the transactions of current month from the balance forward).

Page 8

Therefore, from this teaching of Boicourt, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include a module receives the calculation rule at the second time point triggers a calculation as taught by Boicourt to easily identify the transaction of money and process accounting information to receive final total balance of the account.

As per Claims 11, 32, 48, Hollar teaches all the elements of the claimed invention but is silent regarding wherein the distributing module receives a further total amount and a calculation rule representation from a further application, wherein the further representation has an application identification rule.

Boicourt discloses a financial processing system having a wherein the distributing module receives a further total amount and a calculation rule representation from a further application, wherein the further representation has an application identification rule (Figure 19; via multiple account session number, descriptions for the

account sessions, balance forward, current month, and years to date. The Examiner construes that application identification rule is to be the description for the transaction).

Therefore, from this teaching of Boicourt, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include a module receives multiple account session number, balance forward, description for the account session, current month and year to date balances as taught by Boicourt to easily identify the transaction of money and accelerate the accounting process.

As 12, 33, and 49, Hollar teaches all the elements of claimed invention but is silent regarding wherein the distributing module and the posting module communicate with both applications via first and second interfaces.

Boicourt discloses a financial processing system and method having wherein the distributing module and the posting module communicate with both applications via first and second interfaces (See Figure 1, Figure 19, and abstract; via computer system with different I/Os (Inputs and Outputs) interfaces and the general Ledger account file. The general ledger has the total amount for first time point and the calculation rule (debit/credit) and the final balance (total amount at second point time). The user is allowed to enter and/or modify various types of data using the computer system and integrates set of software functions).

Therefore, from this teaching of Boicourt, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include user interface that

communicates with different modules as taught by Boicourt to allow user to modify accounting related data.

As per Claim 13, 34, 50, Hollar teaches all the elements of claimed invention but is silent regarding wherein the distributing module is coupled to a user interface to changes rules that have been received from the application.

Boicourt discloses a financial processing system and method having wherein the distributing module is coupled to a user interface to changes rules that have been received from the application (See abstract; via the user is allowed to enter and/or modify various types of data using the computer system and integrates set of software functions).

Therefore, from this teaching of Boicourt, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include user interface that communicates with different modules as taught by Boicourt to allow user to modify accounting related data.

As per Claim 20, Hollar discloses all the elements of the claimed invention but is silent regarding wherein the representations comprise global identification to identify table entries.

Boicourt discloses wherein the representations comprise global identification to identify table entries (See Figure 19; via description of transaction).

Therefore, from this teaching of Boicourt, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include a module receives multiple account session number, balance forward, description for the account session, current month and year to date balances as taught by Boicourt to easily identify the transaction of money and accelerate the accounting process.

As per Claim 21, Hollar discloses all the elements of the claimed invention but is silent regarding wherein the distributing module and the posting module both include a reporting function.

Boicourt discloses a financial processing system and method having wherein the distributing module and the posting module both include a reporting function (See Figure 18a, 18b and 18c; via report function on different module).

Therefore, from this teaching of Boicourt, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include reporting function in different modules as taught by Boicourt to easily monitor accounting transactions.

As per Claim 22, Hollar discloses all the claimed invention but is silent regarding wherein both the distributing module and the posting module cooperate with a visual user interface.

Boicourt discloses a financial process system and method having wherein both the distributing module and the posting module cooperate with a visual user interface

(See Figure 1 #14 and #18, paragraph 117, and paragraph 121; via monitor and printer. General ledger with total amount and calculation rule, and the total balance is displayed on the screen).

Therefore, from this teaching of Boicourt, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease transaction management and accounting system of Hollar to include visual user interface as taught by Boicourt to monitor account transactions.

5. Claims 8 - 10, 14, 31, and 46 - 47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollar in view of Lynch (US 20030033242) and in further view of Eder (US 20010034628).

As per Claim 8, Hollar teaches all the elements of claimed invention but is silent regarding wherein at least one of the rules is defined in accordance with Generally Accepted Accounting Principles (GAAP).

Eder discloses a detailed method of and system for modeling and analyzing business improvement programs having at least one of the rules is defined in accordance with Generally Accepted Accounting Principles (See table I; via GAAP).

Therefore, from the teaching of Eder, it would have been obvious to one of ordinary skill in the art at the time of invention was made to modify asset based lease transaction management and accounting system of Hollar to include GAAP rules as taught by Eder to easily identify transactions and related accounting information.

As per Claims 9 and 46, Hollar teaches all the elements of claimed invention but is silent regarding wherein at least one of the rules is a standard rule, selected from the list of: a percentage, and a discount calculation.

Eder discloses a detailed method of and system for modeling and analyzing business improvement programs having wherein at least one of the rules is a standard rule, selected from the list of: a percentage, and a discount calculation (See paragraph 56; via discount rate calculation).

Therefore, from the teaching of Eder, it would have been obvious to one of ordinary skill in the art at the time of invention was made to modify asset based lease transaction management and accounting system of Hollar to include standard rules as taught by Eder to easily identify transactions and related accounting information.

As per Claim 10, 31, and 47, Hollar teaches all the elements of the claimed invention but is silent regarding wherein the posting module provides the modifying instruction to a database that is a knowledge warehouse.

Eder discloses a detailed method of and system for modeling and analyzing business improvement programs having wherein the posting module provides the modifying instruction to a database that is a knowledge warehouse (See paragraph 208; via The software prepares a report summarizing the result of proceeding calculation that is stored in the reports table in the application database).

Therefore, from the teaching of Eder, it could have been obvious to one of ordinary skill in the art at the time of invention was made to modify asset based lease

transaction management and accounting system of Hollar to include database as taught by Eder to store accounting information and easily retrieve information.

. **As per Claim 14,** Hollar teaches all the claimed invention but is silent regarding wherein the modifying instruction is provided such to cause prima nota booking.

Eder discloses a detailed method of and system for modeling and analyzing business improvement programs having wherein the modifying instruction is provided such to cause prima nota booking (See paragraph 59; via for the calculations completed by the present invention, a transaction will be defined as any event that is logged or recorded. As best understood, the Examiner construed that the prima nota as update log based on Heinrichs et al. (US 20030204450). In a broad interpretation, transaction is causing the log or records).

Therefore, from the teaching of Eder, it could have been obvious to one of ordinary skill in the art at the time of invention was made to modify asset based lease transaction management and accounting system of Hollar to include logs or records of transaction as taught by Eder to keep tracks of transactions which are used in accounting process.

6. Claims 15, 35, 51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollar in view of Lynch (US 20030033242) and in further view of Richard Kochanek (HBJ, Financial Accounting).

Art Unit: 3687

As per Claims 15, 35, and 51, Hollar discloses all the elements of claimed invention, but is silent regarding wherein modifying instructions are provided to modify the first and second tables, each of the tables being subdivided into credit and debit sub-tables.

Richard Kochanek discloses financial accounting having wherein modifying instructions are provided to modify the first and second tables, each of the tables being subdivided into credit and debit sub-tables (See Figure 2 – 4 on page 59; via general journal and general ledger with credit and debit columns).

Therefore, from the teaching of Richard Kochanek, it would have been obvious to one of ordinary skill in the art at the time of invention was made to modify asset based lease transaction management and accounting system of Hollar to include tables being subdivided into credit and debit sub-tables as taught by Richard Kochanek to quickly and easily identify the accounting transactions.

7. Claims 16, 36, 52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollar in view of Lynch (US 20030033242) and in further view of Langhans et al. (hereinafter Langhans) (US 5621201).

As per Claims 16, 36, and 52, Hollar teaches all the elements of the claimed invention but is silent regarding wherein the total amount and the calculation rule representation represents the total amount as a pointer to the database.

Langhans discloses automated purchasing control system having wherein the total amount and the calculation rule representation represents the total amount as a pointer to the database (See column 4 lines 16 – 17; via a pointer in the account database).

Therefore, from the teaching of Langhans, it could have been obvious to one of ordinary skill in the art at the time of invention was made to modify asset based lease transaction management and accounting system of Hollar to include a pointer to a database as taught by Langhans to keep the accounting related information correctly in the database.

8. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hollar in view of Lynch (US 20030033242) and in further view of Teng (US 20020091597).

As per Claim 17, Hollar teaches all the elements of the claimed invention but is silent regarding wherein the computer program is implemented as a DDIC.

Teng discloses a method and system of using invoice categorization in accounting management application having program implemented as a DDIC (See paragraph 14; via the invention applies concept of database management and data dictionary. The Examiner construes that DDIC as a data dictionary).

Therefore, from this teaching of Teng, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify asset based lease

transaction management and accounting system of Hollar to include data dictionary implemented in the system as taught by Teng to store transactions and account information for further use.

## Response to Arguments

9. Applicant's arguments filed 9 November 2009 have been fully considered but they are not persuasive.

The Applicant first argues, "First, there is no disclosure in Lynch of an "amount value that is posted to an account" at least because there is no disclosure or suggestion of an "account" in Lynch. Lynch is directed to structuring loans." The Examiner respectfully disagrees. Considering the reference as a whole, Paragraphs 83 - 84 in Lynch teaches deducting the monthly payment from a customer's account. Since monthly payment is deducted from the customer's account, the deduction would be posted in customer's account. Therefore Lynch teaches the limitation of "amount value that is posted to an account."

The Applicant next argues, "Second, nothing in Lynch discloses or suggests a 'periodic schedule' for which an 'amount value is posted to an account." The Examiner respectfully disagrees. Lynch clearly mentioned monthly payment as the Applicant admitted. Considering the reference as a whole, Paragraphs 83 - 84 in Lynch teaches

Art Unit: 3687

deducting the monthly payment from a customer's account. Since monthly payment is deducted from the customer's account, the deduction would be posted in customer's account. Therefore Lynch teaches the limitation of "periodic schedule" and "amount value that is posted to an account."

The Applicant next argues, "As discussed above, the Office Action seems to allege that the 'total loan amount' constitutes the claimed 'amount value.' See Office Action p. 4. But, there is no disclosure or suggestion in Lynch that a 'monthly' payment is for the 'total loan amount.' Indeed, this allegation in the Office Action contradicts the recitations of the claims." The Examiner respectfully disagrees. Total Amount is already covered by Hollar as mentioned in the previous Office Action. Furthermore, Lynch discloses clear detail of total mortgage loan amount in Paragraph 140 – 146 and what monthly payment can be calculated as according to certain rules. Paragraph 140 clearly indicates that total loan amount is \$100000 and paragraph 142 teaches the monthly payment would be \$1450. Paragraph 143- 146 teaches different terms for monthly payment to pay off the loan. None of them indicates one payment of \$100000. In fact, in the ordinary skill in the art, it would not need to be any loan if one can pay the entire payment at one time. Therefore, the Examiner contends Lynch's monthly payment is equivalent to partial amount representation, total loan amount is equivalent to total amount.

Art Unit: 3687

The applicant next argues, "Inasmuch as Lynch does not disclose the claimed 'partial amount representation' or the claimed 'calculation rule representation', a *prima facie* case of obviousness has not been established with respect to claim 1." The Examiner respectfully disagrees. Lynch discloses clear detail of total mortgage loan amount in Paragraph 140 – 146 and what monthly payment can be calculated as according to certain rules. Paragraph 140 clearly indicates that total loan amount is \$100000 and paragraph 142 teaches the monthly payment would be \$1450. Therefore, the Examiner contends Lynch's method of calculating monthly payment is equivalent to partial amount representation and calculation rule representation,

The Applicant next argues, "Applicant asserts that Lynch does not disclose or suggest this feature not only because Lynch does not disclose or suggest a 'modifying instruction,' but also because Lynch does not disclose or suggest a 'modifying instruction' that is 'based on the partial amount representation.'" The Examiner respectfully disagrees. As mentioned in previous Office Action, Lynch clearly discloses "the partial amount representation received by the posting module (Paragraph 124 – 147 teaches calculating monthly payment rate using the total loan amount and rate and time information)." And The Examiner clearly indicated this limitation in the Office Action.

Art Unit: 3687

## Conclusion

10. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ig T. An whose telephone number is (571)270-5110. The examiner can normally be reached on Monday - Thursday from 9:30 AM to 5 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew S. Gart can be reached on 571-272-3955. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
